

# JakeDineen\_2.3\_Tuples

July 13, 2018

Create a sequence of items in Python.

The sequence should include at least five items.

Identify the length of the tuple and list the items in your tuple using Python.

```
In [7]: var = ('person', 'car', 'bike', 'house', 'home', 'dog', 'cat')
        print('length of tuple is: {}'.format(len(var)))
```

length of tuple is: 7

```
In [20]: for i,j in enumerate(var):
        print(i+1,j)
```

```
1 person
2 car
3 bike
4 house
5 home
6 dog
7 cat
```

```
In [29]: import sys
        'size in bytes: {}'.format(sys.getsizeof(var))
```

```
Out[29]: 'size in bytes: 104'
```
